# Weekly Coal Production

Production for Week Ended:  
April 25, 1987

# Highlights

U.S. coal production in the week ended April 25, 1987, as estimated by the Energy Information Administration, totaled 16.4 million short tons (bituminous coal and lignite, 16.3 million short tons; Pennsylvania anthracite, .09 million short tons). This was 0.7 percent lower than in the previous week, and was 6.1 percent lower than production in the corresponding week of 1986.

The effects of the United Mine Workers of America (UMWA) strikes in Arizona, New Mexico, Colorado and Montana have been mitigated in some cases due to offsetting shipments from other mines in the region. Shipments from the Black Mesa Mine

in Arizona, via coal slurry pipeline, ceased during the week ending April 25, 1987, due to maintenance at the receiving power plant.

Cumulative U.S. coal production from January 1 through April 25, 1987, was estimated at 275.6 million short tons, 6.6 percent below the 295.0 million short tons produced in the comparable period in 1986.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.

Figure 1. Coal Production

Table 1. Coal Production

Production and Carloadings	Week Ended			Year to Date		
	04/25/87	04/18/87	04/26/86	04/25/87	04/26/86	Percent Change
Production (Thousand Short Tons)						
Bituminous <sup>1</sup> and Lignite	16,344	16,471	17,427	274,241	293,930	-6.7
Pennsylvania Anthracite	87	76	70	1,350	1,027	31.5
U.S. Total	16,431	16,547	17,497	275,592	294,957	-6.6
Railroad Cars Loaded	104,550	105,075	112,483	1,713,074	1,823,802	

<sup>1</sup>Includes subbituminous coal.

Note: 1986 and 1987 data are preliminary. Total may not equal sum of components because of independent rounding.
